

iWay Software enables online, real-time, and batch integration of information assets, internal business processes, and external business partners all from a single platform.

Enterprise Information Management

EIM provides comprehensive support for any data, protocol, or source.

True, Enterprise-Wide Information Management

In today's global marketplace business transactions have become highly complex, and companies generate more data than ever before. Unfortunately that data often resides in a series of fragmented, siloed systems and documents that make it nearly impossible to access and leverage information for competitive advantage. This leads to people making critical business decisions based on information that is incomplete, incorrect, or outdated. To solve this problem, a growing number of businesses are turning to enterprise information management (EIM).

EIM helps companies better leverage corporate information to increase operational efficiency, reduce overhead, facilitate regulatory compliance, and more. The key to an effective EIM strategy is that it improves the accessibility of enterprise information and also provides broad-reaching infrastructure that seamlessly integrates data – regardless of its source or location – while ensuring optimum data quality. Additionally, it must provide tools that make it easy for end users at all levels to transform raw content into relevant, real-time intelligence.

The iWay EIM Suite

The iWay EIM suite is a robust, comprehensive platform that facilitates real-time management of any information from anywhere across your entire enterprise. Regardless of where your data resides, whether it's in structured or unstructured format, the iWay EIM suite can seamlessly integrate and enrich it, allowing for simple and efficient access and management.

The iWay EIM suite offers a single, complete platform for both real-time and batch integration. This open and configurable solution delivers unmatched flexibility, supporting any rules, reference data, integration options, or technology platforms. It can also be used as an information-delivery server, distributing vital, timely data to users throughout an organization.

The iWay EIM suite provides:

- Unparalleled data integration and quality management via batch or real-time methods
- Direct access to both structured and unstructured content from any source
- Real-time monitoring, reporting, and delivery of information from across the organization
- Seamless integration with business intelligence environments
- Comprehensive data-quality services that validate, cleanse, identify, match, and enrich all enterprise information to ensure optimum accuracy, timeliness, and reliability
- End-to-end management of all metadata and master data
- Speed and scalability that allows the EIM suite to retrieve, transform, and move millions of records in only a few minutes – and real-time information is accessed in just milliseconds
- Advanced extract, transform, and load (ETL) capabilities
- Full search engine support that automatically enriches business events and data extracts
- Support for low- and medium-latency events, as well as transactions and batch-oriented integration

Integrated, End-to-End Activity Monitoring

The iWay EIM suite also includes fully integrated, end-to-end monitoring of all key business activities and related data. This provides complete, unhindered visibility into operations, ensuring swift, unhindered information flow across the organization, and allowing for the immediate identification and correction of bottlenecks or inefficiencies in core activities.

Today's Most Powerful Integration Platform

Built on a single, powerful foundation made up of the patented, market-leading iWay Universal Adapter Framework (which includes connections to more than 300 data sources) and the iWay Integration Engine (an intuitive and graphical integration server), the iWay EIM suite empowers you with the ability to seamlessly link all your information assets and rapidly assemble integration from pre-built components – with absolutely no manual coding required. It also includes facilities for the enhancement of data quality and the complete management of metadata.

Using the iWay EIM suite to support your enterprise information management strategy guarantees maximum scalability and complete investment protection. The same platform you deploy for data integration and quality today can be extended to support metadata management, business process automation, or business-to-business integration in the future.
